Concept (1-2 paragraphs) – Who is your target audience? What do you hope to convey about yourself and/or your work with this site? What will be the key elements and concepts behind the experience of your site? How will you leverage the medium of the web?

My target audience for this portfolio is potential employers or fellow artist collaborators.I want to convey the intersectionality and interdisciplinary nature of my work in this site. I currently have a portfolio website so I can easily send people a showcase of my best work. It is pretty simple, however, and I made it with a website builder service. I hope to build an improved portfolio that can set me apart from the typical website (like the one I currently have). I envision an illustrative background, perhaps one that can change as a reaction to scrolling. I would also like the site's key elements to be dynamic, rather than static images and may incorporate some of my motion graphics in them.

Sitemap – A diagram of the pages of your site and the links between them.
